SafeVue™ Balloon Catheter
Coronary Sinus Balloon Venography Catheter System

with large diameter balloon, separate inflation and guidewire lumens, pressure relief system, and radiopaque tip marker band

Designed with the largest diameter balloon available for optimal coronary sinus occlusion and venography, the SafeVue Balloon Catheter may also be used for angiography, wedge pressure measurements, or to occlude a vessel while maintaining a distal lumen for guidewire placement.

Stick with the best.
SafeVue™ Balloon Catheter is part of a complete line of implantable device therapy products and accessories that continue to set new standards for performance and features while facilitating better outcomes.

**FEATURES**

- Large 1.75cm balloon diameter with high diameter-to-length aspect ratio for optimal coronary sinus occlusion and venography visualization
- Rotationally wrapped balloon with “floating” coaxial catheter design enables the balloon to fit through a 6.5F introducer
- Pressure relief valve in fluid communication with the inflation lumen regulates the balloon pressure, minimizing the potential for vessel trauma or dissection
- Radiopaque marker band at tip
- Compatible with the SafeSheath CSG family of introducers
- Inner lumen accepts a 0.025” diameter guidewire
- Latex- and PVC-free design

**PRODUCT DESCRIPTION**

The SafeVue™ Balloon Venography Catheter enables temporary vascular occlusion or balloon catheter flotation, while providing a port for distal contrast injection or guidewire placement. SafeVue may be used for procedures requiring angiography, wedge pressure measurements, or any other procedure where a vessel needs to be occluded while maintaining a distal lumen.

SafeVue’s low profile design allows advancement of the device through any CS access sheath, 6.5 French or larger, including the SafeSheath CSG family of introducers. It features a port for distal contrast injection or guidewire placement, a pressure relief valve for regulating balloon pressure and reducing the possibility of vessel trauma, and a radiopaque tip marker band for better fluoroscopic visualization.

**ORDERING INFORMATION**

Each SafeVue Balloon Catheter System kit includes:

- One balloon catheter
- One 3cc syringe
- Five (5) kits per box
